Summary

Data Science enthusiast with 3+ years of software engineering experience and a strong foundation in machine learning, data analytics, and statistical modeling. Skilled in Python, SQL, and big data technologies with hands-on experience building predictive models, performing feature engineering, and working with large datasets. Passionate about applying data-driven insights to improve forecasting, optimization, and business decision-making. Currently pursuing a Master's in Applied Data Intelligence at San Jose State University.

Education

San Jose State University <i>Master of Science in Applied Data Intelligence</i>	California Jan 2025 – Present (Exp. Graduation: Dec 2026)
CDAC Pune <i>Post Graduate Diploma in Big Data Analytics</i>	India Graduation: Feb 2024
AISSMS COE <i>Bachelor of Engineering (Computer Engineering)</i>	Pune, India Graduation: Jul 2021

Skills

Programming Languages: Python, SQL, R, C++, Java
Data Science & ML: Regression, Classification, Clustering, Forecasting, Optimization, RAG (Gen AI)
Libraries/Frameworks: NumPy, Pandas, scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn
Big Data & Cloud: Apache Spark, Databricks, Kafka, Microsoft Azure, AWS
Databases: MySQL, SQL Server, MongoDB
Data Visualization: Tableau, PowerBI

Professional Experience

Nitor Infotech <i>Software Engineer (Tools: Databricks Lakehouse, Microsoft Azure)</i>	India Apr 2024 – Dec 2024
- Designed and deployed GenAI applications leveraging large language models (LLMs). - Built and maintained data pipelines on Azure Databricks and Delta Lake to process high volume structured and unstructured data. - Collaborated with cross-functional teams to optimize data ingestion and retrieval processes, improving model performance.	
HCL Technologies <i>Software Engineer (Tools: ServiceNow, Now Intelligence, Predictive Intelligence)</i>	India Sep 2022 – Nov 2023
- Developed predictive intelligence modules in ServiceNow to classify and forecast support incidents. - Automated repetitive tasks by applying statistical modeling and machine learning techniques, reducing manual efforts by 30%. - Enhanced incident detection accuracy by applying supervised learning algorithms.	
FIS Global <i>Software Engineer (Tools: Adeptia)</i>	India Aug 2021 – May 2022
- Applied regression and gradient descent algorithms for financial data forecasting and business onboarding analytics. - Automated data transformation and integration using Adeptia; improved efficiency by 25%. - Analyzed financial data using Artificial Intelligence for customers and presented insights in customer-proposed formats. - Leveraged Google Cloud for scalable storage and real-time accessibility of customer datasets.	

Projects

Urban Air & Weather Analytics Platform <i>Apache Airflow, Snowflake, dbt, Python, Power BI</i>	
- An end-to-end Modern Data Stack project for real-time air-quality intelligence, combining automated ingestion, dbt transformations, machine learning pipelines, and a Power BI dashboard. - The platform predicts next-hour AQI, detects anomalies, and provides a unified analytics view for environmental monitoring in New Delhi.	
Traffic Sign Recognition on GTSRB dataset <i>Python, CNN, Transfer Learning, Gradio</i>	
- Implemented CNN and transfer learning to classify traffic signs on the GTSRB (German Traffic Sign Recognition Benchmark) dataset. - Achieved 95% classification accuracy by optimizing model training with data augmentation and hyperparameter tuning. - Applied findings to potential autonomous driving use cases.	
Passenger Survival Prediction on Titanic <i>Python, Machine Learning, Tableau</i>	
- Built supervised learning models (Logistic Regression, Random Forest, SVM) to predict survival outcomes. - Conducted feature engineering and data preprocessing; achieved ~82% accuracy on the test dataset. - Visualized insights and key predictors using Tableau dashboards for decision-making.
